Subject: Fwd: LPR Air Monitoring - Availability of PQ-100 Air Samplers
[ATT00002.txt](#)
[Air Monitoring Locations modification 20130801.pdf](#)

Mike, I mentioned this morning about difficulty getting all the equipment needed for air sampling. Following is CH2M-Hill's proposal for dealing with the inability to get one more PQ-100 sampler. Please advise if this is acceptable (moving the sampler that was going to be near the bocci ball courts to be closer to the dredging operation itself).

Stan,

As requested by EPA, CH2M HILL has added the third location, PMS#3, to the air monitoring plan. This third location was to have two PUF samplers one each to collect composites for dioxin and PCBs and a PQ-100 that collects the samples for PM10 and mercury. CH2M HILL has a nationwide contract with Pine Environmental (headquartered in NJ) for all our field equipment and supplies, therefore we

have some pull with them and this project is a big project for them as well. Unfortunately, the PQ-100 samplers are hot commodities and Pine does not have any more and they have reached out to other environmental equipment renters and to the manufacturer and there a no PQ-100 to be had for weeks. Therefore, CH2M HILL proposes to move the PQ-100 from the PMS#2 location to the PMS#3 location so that we have a full suite of COPCs sampling capability at PMS#3 (dioxin, PCB, mercury and PM10) nearer to the start of dredging. Therefore, the location PMS#2 will have real-time monitoring and two PUF samplers (dioxin and PCBs) but will not have a PQ-100 and the capability to sample for mercury and PM10.

Please pass this by EPA for their review?

Thanks,

Roger
